

P24 Antibody

Cat # NB-19-0032

Immunogen Data

Description: Viral protein p24, is a structural protein that makes up most of the HIV viral core, or 'capsid'. High levels of p24 are present in the blood serum of newly infected individuals during the short period between infection and seroconversion, making p24 antigen assays useful in diagnosing primary HIV infection

Immunogen: Recombinant p24 protein.

High levels of p24 are present in the blood serum of newly infected individuals during the short period between infection and seroconversion, making p24 antigen assays useful in diagnosing primary HIV infection.

Immunogen: Recombinant p24 protein.

Applications

Tested Applications: ELISA. It can also be used as a capture antibody in ELISA Sandwich jointly with the clone P6E8 as a detection antibody. Western Blot. The usefulness of this product in other applications has not been determined.

Recommended Dilutions:

ELISA: 1/5.000 to 1/200.000 using the antibody at an initial concentration of 1 mg/ml.

WB: 1/1.000 using the antibody at an initial concentration of 1 mg/ml.

Bulk quantities also available.

For Research Use Only. Not for Diagnostic or Therapeutic Use.
